SUBJECT: USSR/Mining

AUTHOR: Tikhomirov, V.P., Engineer

TITLE: Open Mine Operation in 2 Extraction Shifts Six Days a Week  
(Rabota kar'yera na preryvnoy rabochey nedele v dve dobychnyye smeny)

PERIODICAL: Gornyy Zhurnal, 1957, #10, p 75 (USSR)

ABSTRACT: The open mine of the Sori Molybdenium Combine operated in 3 extraction shifts daily during 4 years. The actual output was constantly below the planned one.

In October 1954, two-shift operation was introduced with a common day off. After this conversion the production plan was always filled. In 1955, the plan was exceeded by 0.9 % and in 1956 it was exceeded by 16.4 %.

The practice of the Sori open mine showed positive results and should be applied also in other enterprises of the mining industry.

The article contains 1 table.

TITLE: Polyelectret effect in potassium bromide monocrystals

SOURCE: IVUZ. Fizika, no. 4, 1966, 162-163

TOPIC TAGS: tunnel effect, electron capture, electron hole

ABSTRACT: Polished, optically homogeneous samples of KBr (4 x 20 x 20 mm) were clamped between aluminum electrodes (18 x 18 mm) and heated to 530°C, after which a constant field of 2 to 7 kv/cm was applied. After two hours the sample was gradually cooled to room temperature. The crystals were then reheated to 530°C until the depolarization current dropped to the level of the thermocurrent of a nonpolarized sample. Approximately 50 samples were tested.

The regions of the samples adjacent to the electrodes play an important role. When an external field is applied, impurity electron capture centers accumulate near one electrode and holes near the other. Through thermodepolarization the electrons, owing to thermoemission and the tunnel effect, penetrate from one electrode into the surface layer and neutralize the hole capture centers. A similar process occurs at the other electrode. The field is found to become redistributed.

After an interval of time between two successive thermodepolarizations, the electrons diffuse. The observed phenomenon is termed the "polyelectret effect." Orig. art. has: 1 figure. [JPRS: 39,040]

Chemical composition of preserved fruits. V. V. Tikhomirov and M. M. Miloyan. *Populyarny Pitaniye* 9, No. 6, 80-8 (1940); *Chem. Zentr.* 1941, II, 2432. — Examn. of Russian fruit preserves showed a normal ratio between fruit and sirup. They contained 2.70-10.22% glucose, 0.10-13.88% sucrose, 1.05-10.76% fructose (glucose usually exceeds fructose), 0.075-1.12% N, and 0.35-1.02% protein. The cellulose content is approx. const., but the hemicelluloses range from 0.21 to 1.25%. The dry substance varies as much as 8%; preserved pears contain the least, preserved cherries the most. The unferd. constituents amount to 15.67% in pears, 11.2% in spring cherries, 7.01% in late cherries, 10.43% in greengage plums, 8.68% in peaches, 4.92% in apples, and 4.8% in apricots; they consist of N-free substances in the fruit, and salts of org. acids. The total acid content, as malic, is 0.1-1.48%, the pH 3.13-4.11 (mostly 3.4-3.6). Preserved apricots contain the largest amt. of carotene (1.25-2.13 mg. %) and of vitamin C (4.19-9.2 mg. %), and have the highest calorific value (60.75-92.88 Cal.); pears have the lowest values of all 3. Title : From the history of geological sciences

Periodical : Izv. AN SSSR. Ser. geol. 5, 145 - 149, Sep - Oct 1954

Abstract : The founding of the University of Kazan (now called V. I. Ul'yanov-Lenin University) on 5 November 1804 is recalled. The 20's of the last century saw the beginning of interest in geology at this institution, and this has since developed so that the university has such specialties as geochemistry, geophysical methods of research, geology of petroleum, hydrogeology, and others. In commemorating the birth of Aleksey Petrov Pavlov 100 years ago the life work of this outstanding geologist is recounted. An account is given of the work of Andrey Dimitrevich Arkhangel'skiy, the occasion being the 75th anniversary of his birth. A description is given of the work of the traveler and naturalist Ivan Gottlib Ivanovich Georgi, born 225 years ago. The 150th anniversary of the death of Iogan Tobiy Egorovich Lovits (1757 - 1804) is the occasion for recalling the work of this mathematician and astronomer.

Title : ~~Complex investigations by geologists in Kazakhstan.~~

Periodical : Vest. Mosk. un., Ser. fizikomat. i yest. nauk, 9, No 1, 141-142,  
Feb 1954

Abstract : Since April, 1952, a collective from the Geological Faculty of Moscow University has been conducting large-scale scientific research and productive operations in one of the least investigated regions of Central Kazakhstan, namely the north borderland of Bed-Pak-Dala (Golodnaya Step) "Hungry Steppe," south of the tremendous salt lake Teniz, an escapeless sink. The main problem was to find there useful minerals and constructional materials for industry. Directing the expedition were Prof. A. A. Bogdanov, head of the Chair of Historical Geology, and Ye. M. Velikovskaya, Director of Geology-Mineral Science.

Title : From the history of geological science - Memorable anniversaries

Periodical : Izv. AN SSSR. Ser. geol. 1, 127-129, Jan-Feb 1955

Abstract : Anniversaries as set forth below occurred in March and April of 1955. March 8 marked 200 years since the death of Stepan Petrovich Krasheninnikov (1711-1815). This academician and professor of botany and natural history contributed to the geological knowledge of Russia through his expeditions. March 3 was the 200th anniversary of the birth of the academician Ivan Filippovich German (1755-1815). Through his expeditions, German added to the collection of mineral and geological specimens. The 30th of April marked the 150th anniversary of the death of Apollos Apollosovich Musin-Pushkin
